**Artificial i**ntelligence **E**nvironmentalist **AiE**

**EVE's patented intelligent technology can be found in all segments of life.**

**AiE uses Artificial Intelligence to improve our lives.**

**Indoor venues are full of air contaminants that are proving to be very harmful.**

The way back to safe group indoor gatherings with **AiE**

**AiE works with other intelligent infrastructure.**

AiE performs preset maneuvers and reacts to potential “bad air”

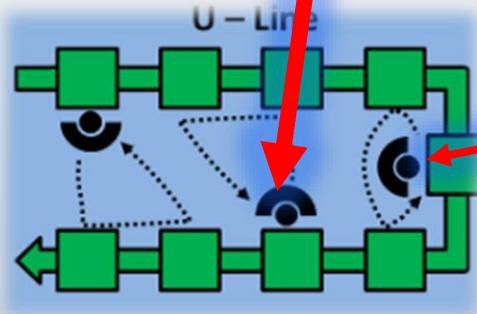

When assembling components technicians are dealing with dangerous welding gases.

When team coding is needed every 4 stations will have one AiE

**AiE** mobile floor models are setup to patrol preset zones. They respond to a call from another **AiE** to join a higher-level response.

Roaming on the counters

AiE uses its funnel shaped head for monitoring air quality.

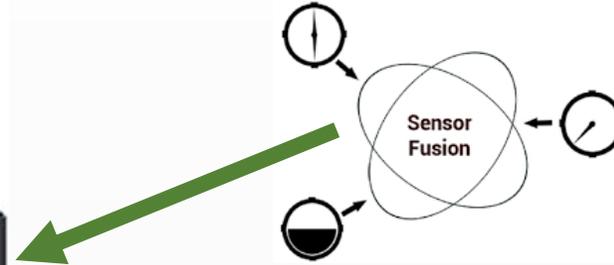

AiE's cone tip maneuvers to preset coordinates, pulling in air samples.

A user can manually move the arm to be closer to the cause of a contaminant.

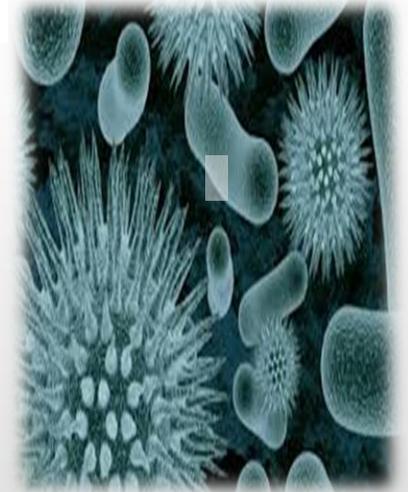

Upon any "bad air" detection AiE's air intake goes to full power, extending the robotic arm outward. (Unrolling it)

AiE uses multiple sensors to detect any excessive amount of "bad air".

This potential "bad air" could be a contaminant gas or smoke, a pathogen, or simply the cough or sneeze from a person in the room.

If the contaminate is filterable, the system channels the air to the internal filters and then back out.

If the contaminate is deemed not filterable, the system will inflate an **emergency contaminate bag**, or if connected to an external line, it will expel it.

When **AiE** is used as a single unit or is networked with more units, AiE has a central control system that can be on location or used with an App at any remote location.

Each **AiE** sends a notice to its control panel regarding location and contaminate type and action taken.

Upon the air retuning to levels that are acceptable, **AiE** will retract the robotic arm and revert back to monitoring mode. The **AiE** system saves logs of events for analysis.

AiE was originally designed for factory air safety and it is now finding its way to offices, classrooms, restaurants and home kitchens.

**AiE can be embedded in the most pleasant ways for all occasions.**

AiE autonomously makes its way around the room.

**US Patent Granted 5 / 2022**
